

Department of Economic  
and Social Affairs  
Statistics Division

# World Statistics Pocketbook 2024 edition

Containing data available  
as of 31 July 2024

United Nations, New York, 2024

The **Department of Economic and Social Affairs** of the United Nations is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which United Nations Member States draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

#### Note

The designations employed and the presentation of the material in the present publication do not imply the expression of any opinion whatsoever on the part of the United Nations concerning the legal status of any country or of its authorities, or the delimitations of its frontiers. The term “country” as used in this report also refers, as appropriate, to territories or areas. The designations of country groups are intended solely for statistical or analytical convenience and do not necessarily express a judgement about the stage reached by a particular country, territory, or area in the development process. Mention of the names of firms and commercial products does not imply endorsement by the United Nations. The symbols of United Nations documents are composed of capital letters and numbers.

The term “country” as used in the text of this publication also refers, as appropriate, to territories or areas.

pop.	Population
Rep.	Republic
SAR	Special Administrative Region
UN	United Nations
UNHCR	Office of the UN High Commissioner for Refugees
United Kingdom	United Kingdom of Great Britain and Northern Ireland
United States	United States of America
UNSD	United Nations Statistics Division
US\$/USD	United States dollars

The metric system of weights and measures has been employed in the *World Statistics Pocketbook*.

The *World Statistics Pocketbook* is an annual compilation of key economic, social and environmental indicators, presented in one-page profiles. This edition includes profiles for the 30 world geographical regions and 232 countries or areas. Prepared by the United Nations Statistics Division of the Department of Economic and Social Affairs, it responds to General Assembly resolution 2626 (XXV), in which the Secretary-General is requested to supply basic national data that will increase international public awareness of countries' development efforts.

The indicators shown are selected from the wealth of international statistical information compiled regularly by the Statistics Division and the Population Division of the United Nations, the statistical services of the United Nations specialized agencies and other international organizations and institutions. Special recognition is gratefully given for their assistance in continually providing data.

## Organization of the Pocketbook

The profiles are presented first with the world and its geographical regions and sub-regions, based on the M49 regional classification<sup>1</sup>, and then countries and areas alphabetically according to their names in English. Each profile is organised into 5 sections, where relevant and/or available:

- *General information*: includes data on surface area, population and population density, sex ratio of the population, capital city and its population, national currency and its exchange rate to the US dollar, location by geographical region and the date of admission to the United Nations.
- *Economic indicators*: includes data on national accounts Gross domestic product (GDP), GDP per capita, GDP growth rate, Gross Value Added (GVA) share by industry, employment share by industry, unemployment rate, labour force participation rate, consumer price index, agricultural production index, the value of total exports, imports and the trade balance and balance of payments.
- *Major trading partners*: shows a country's main trading partners.
- *Social indicators*: includes data on population (growth rates, including for the urban population), total fertility rate, life expectancy at birth, population age distribution, international migrant stock, refugees, under five mortality rate, health (expenditure and physicians), education (expenditure and gross enrolment ratios), intentional homicide rate and seats held by women in the National Parliament.
- *Environmental and infrastructure indicators*: includes data on internet users, Research & Development expenditure, threatened species, forested area, CO2 emission estimates, energy production and energy

---

<sup>1</sup> See UNSD website: <https://unstats.un.org/unsd/methodology/m49/>

supply per capita, tourist/visitor arrivals, important sites for terrestrial biodiversity protected, population using safely managed water sources and sanitation facilities and Official Development Assistance received or disbursed.

The complete set of indicators, listed by category and in the order in which they appear in the profiles, is shown before the country profile section (see page ix). Not all indicators are shown for each country or area due to different degrees of data availability.

The technical notes section, which follows the country profile pages, contains brief descriptions of the concepts and methodologies used in the compilation of the indicators as well as information on the statistical sources for the indicators. Readers interested in longer time-series data or more detailed descriptions of the concepts or methodologies should consult the primary sources of the data and the references listed in the section following the technical notes.

For brevity the Pocketbook omits specific information on the source or methodology for individual data points, and when a data point is estimated no distinction is made between whether the estimation was done by the international or national organization. See the technical notes section for the primary source which may provide this information.

### **Time period**

This issue of the *World Statistics Pocketbook* presents data for the economic, social, environmental and infrastructure sections for three reference years - 2015, 2020 and 2024 - when available or the most recent data previous to these years, back to 2000. These instances are footnoted in each profile. For the general information and major trading partners sections the reference year is 2024 and 2023 respectively, unless otherwise footnoted.

### **Acknowledgement**

The *World Statistics Pocketbook* is prepared annually by the Development Data and Outreach Branch of the Statistics Division, Department of Economic and Social Affairs of the United Nations Secretariat. The programme manager is Matthias Reister and Anuradha Chimata is the editor; David Carter, Mohamed Nabassoua, Kebebush Welkema and Yuxi Zhang provided production assistance; Joshua Kneidl provided IT support. Comments on this publication are welcome and may be sent by e-mail to [statistics@un.org](mailto:statistics@un.org).

## General information

---

Region  
Population (000)  
Population density (per km<sup>2</sup>)  
Capital city  
Capital city population (000)  
UN membership date  
Surface area (km<sup>2</sup>)  
Sex ratio (males per 100 females)  
National currency  
Exchange rate (per US\$)

---

## Economic indicators

---

GDP: Gross domestic product (million current US\$)  
GDP growth rate (annual %, constant 2015 prices)  
GDP per capita (current US\$)  
Economy: Agriculture, industry and services and other activity (% of GVA)  
Employment in agriculture, industry and services & other sectors (% of employed)  
Unemployment rate (% of labour force)  
Labour force participation rate (% of female/male population)  
CPI: Consumer Price Index (2010=100)  
Agricultural production index (2014-2016=100)  
International trade: Exports, imports and balance (million current US\$)  
Balance of payments, current account (million current US\$)

---

## Major trading partners (% of exports and imports)

---

## Social indicators

---

Population growth rate (average annual %)  
Urban population (% of total population)  
Urban population growth rate (average annual %)  
Fertility rate, total (live births per woman)  
Life expectancy at birth (females/males, years)  
Population age distribution (0-14/60+ years old, %)  
International migrant stock (000/% of total population)  
Refugees and others of concern to the UNHCR (000)  
Under five mortality rate (per 1 000 live births)  
Health: Current expenditure (% of GDP)  
Health: Physicians (per 1 000 population)  
Education: Government expenditure (% of GDP)  
Education: Primary, Lower secondary and Upper secondary gross enrolment ratio (females/males per 100 population)  
Intentional homicide rate (per 100 000 population)  
Seats held by women in the National Parliament (% of total seats)

---

## Environmental and infrastructure indicators

---

Individuals using the Internet (per 100 inhabitants)  
Research & Development expenditure (% of GDP)  
Threatened species (number)  
Forested area (% of land area)  
CO<sub>2</sub> emission estimates (million tons/tons per capita)  
Energy production, primary (Petajoules)  
Energy supply per capita (Gigajoules)  
Tourist/visitor arrivals at national borders (000)  
Important sites for terrestrial biodiversity protected (%)  
Population using safely managed drinking water sources (urban/rural, %)  
Population using safely managed sanitation facilities (urban/rural, %)  
Net Official Development Assistance disbursed (% of GNI of donor)  
Net Official Development Assistance received (% of GNI of recipient)

---

\* The complete set of information and indicators listed here may not be shown for each country or area depending upon data availability. The technical notes provide a brief description of each information item and indicator.

**a** Projected estimate (medium fertility variant). **b** 2022. **c** 2019. **d** 2005. **e** Estimate. **f** 2023. **g** Data refers to a 5-year period preceding the reference year. **h** Calculated by the UN Statistics Division. **i** Including refugees. **j** Based on calendar year (January 1 to December 31). **k** 2021. **l** 2014. **m** 2018. **n** 2013. **o** 2012. **p** Data at 1 January of the reporting year. **q** Population aged 3 years and over.

Below are brief descriptions of the indicators presented in the world, regional and country profiles. The terms are arranged in alphabetical order.

**Agricultural production index** is calculated by the Laspeyres formula based on the sum of price-weighted quantities of different agricultural commodities produced. The commodities covered in the computation of indices of agricultural production are all crops and livestock products originating in each country. Practically all products are covered, with the main exception of fodder crops. Production quantities of each commodity are weighted by the average international commodity prices in the base period and summed for each year. To obtain the index, the aggregate for a given year is divided by the average aggregate for the base period 2014-2016. Indices are calculated without any deductions for feed and seed and are referred to as "gross" by the Food and Agriculture Organization of the United Nations (FAO).

**Source of the data:** Food and Agriculture Organization of the United Nations (FAO), Rome, FAOSTAT database, last accessed May 2024.

**Balance of payments** is a statement summarizing the economic transactions between the residents of a country and non-residents during a specific period, usually a year. It includes transactions in goods, services, income, transfers and financial assets and liabilities. Generally, the balance of payments is divided into two major components: the current account and the capital and financial account. The data on balance of payments correspond to the current account category. The current account is a record of all transactions in the balance of payments covering the exports and imports of goods and services, payments of income, and current transfers between residents of a country and non-residents.

**Source of the data:** International Monetary Fund (IMF), Washington, D.C., Balance of Payment (BOP) Statistics database, last accessed June 2024.

**Capital city and capital city population** is the designation of any specific city as a capital city as reported by the country or area. The city can be the seat of the government as determined by the country. Some countries designate more than one city to be a capital city with a specific title function (e.g., administrative and/or legislative capital). The data refer to the year 2024, unless otherwise stated in a footnote.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Urbanization Prospects (WUP): The 2018 Revision", last accessed May 2018.

**CO<sub>2</sub> emission estimates** represent total CO<sub>2</sub> emissions from fuel combustion. This includes CO<sub>2</sub> emissions from fuel combustion in IPCC Source/Sink Category 1 A Fuel Combustion Activities and those which may be reallocated to IPCC Source/Sink Category 2 Industrial Processes and Product Use under the 2006 GLs.

**Source of the data:** Energy Statistics Section, UNSD, last accessed February 2024.

**CPI: Consumer price index** measures the period-to-period proportional change in the prices of a fixed set of consumer goods and services of constant quantity and characteristics, acquired, used or paid for by the reference population. The index is constructed as a weighted average of a large number of elementary aggregate indices. Each of the elementary aggregate indices is estimated using a sample of prices for a defined set of goods and services obtained in, or by residents of, a specific region from a given set of outlets or other sources of consumption. The indices here generally refer to “all items” and to the country as a whole, unless otherwise stated in a footnote.

**Source of the data:** United Nations Statistics Division (UNSD), New York, Monthly Bulletin of Statistics (MBS), last accessed June 2024.

**Economy: agriculture, industry and services and other activity** presents the shares of the components of Gross Value Added (GVA) at current prices by kind of economic activity; agriculture, industry (mining, manufacturing, and construction) and in services and other sectors based on the sections of the International Standard Industrial Classification of All Economic Activities (ISIC), Revision 3, unless a different revision is stated in a footnote.

**Source of the data:** United Nations Statistics Division (UNSD), New York, National Accounts Statistics: Analysis of Main Aggregates (AMA) database, last accessed April 2024.

**Education: Government expenditure** shows the trends in general government expenditures for educational affairs and services at primary, lower secondary and upper secondary levels and subsidiary services to education, expressed as a percentage of the gross domestic product.

**Source of the data:** United Nations Educational, Scientific and Cultural Organization (UNESCO), Montreal, the UNESCO Institute for Statistics (UIS) statistics database, last accessed April 2023.

**Education: Gross enrolment in primary, lower secondary or upper secondary education** is the total enrolment in the specific level of education, regardless of age, expressed as a percentage of the eligible official school-age population corresponding to that specific level of education in a given school year. Education at the primary level provides the basic elements of education (e.g. at elementary school or primary school). Programmes at lower secondary (or first stage of secondary) education are typically designed to build on the learning outcomes from primary education. Usually, the aim is to lay the foundation for lifelong learning and human development upon which education systems may then expand further educational opportunities. Some education systems may already offer vocational education programmes at this level education to provide individuals with skills relevant to employment.

Upper secondary is the second or final stage of general and vocational secondary education. Programmes at upper secondary education are typically designed to complete secondary education in preparation for tertiary education or provide skills relevant to employment, or both. The programmes offered are more varied, specialised and in-depth instruction than programmes in lower secondary education. Programmes are more differentiated, with an increased range of options and streams available. Enrolment is measured at the beginning of the school or academic year. The gross enrolment ratio at each level will include all pupils whatever their ages, whereas the population is limited to the range of official school ages. Therefore, for countries with almost universal education among the school-age population, the gross enrolment ratio can exceed 100 if the actual age distribution of pupils extends beyond the official school ages.

**Source of the data:** United Nations Educational, Scientific and Cultural Organization (UNESCO), Montreal, the UNESCO Institute for Statistics (UIS) statistics database, last accessed April 2024.

**Employment in agricultural, industrial and services and other sectors:** The “employed” comprise all persons above a specified age who, during a specified brief period, either one week or one day, were in “paid employment” or in “self-employment”, see ILO’s Current International Recommendations on Labour Statistics. The data refer to those 15 years and over, unless otherwise stated in a footnote, who perform any work at all in the reference period, for pay or profit in agriculture (agriculture, forestry and fishing), industry (mining and quarrying; manufacturing; electricity, gas, steam and air conditioning supply; water supply, sewerage, waste management and remediation activities; and construction) and in services and other sectors based on the sections of the International Standard Industrial Classification of All Economic Activities (ISIC), Revision 4, unless an earlier revision is stated in a footnote.

**Source of the data:** International Labour Organization (ILO), Geneva, Key Indicators of the Labour Market (KILM 9<sup>th</sup> edition) and the ILOSTAT database, last accessed April 2024.

**Energy production, primary,** is the capture or extraction of fuels or energy from natural energy flows, the biosphere and natural reserves of fossil fuels within the national territory in a form suitable for use. Inert matter removed from the extracted fuels and quantities reinjected, flared or vented are not included. The resulting products are referred to as “primary” products. It excludes secondary production, that is, the manufacture of energy products through the process of transforming primary and/or other secondary fuels or energy. Data are provided in a common energy unit (Petajoule) and refer to the following primary energy sources: hard coal, brown coal, peat, oil shale, conventional crude oil, natural gas liquids (NGL), other hydrocarbons, additives and oxygenates, natural gas, fuelwood, wood residues and by-products, bagasse, animal waste, black liquor, other vegetal material and residues, biogasoline, biodiesels, bio jet kerosene, other liquid biofuels, biogases,

industrial waste, municipal waste, nuclear, solar photovoltaic, solar thermal, hydro, wind, geothermal, and tide, wave and other marine sources. Peat, biomass and wastes are included only when the production is for energy purposes. See International Recommendations for Energy Statistics (2011) and the UN publication Energy Balances for a complete description of the methodology.

**Source of the data:** United Nations Statistics Division (UNSD), New York, Energy Statistics Yearbook 2021, last accessed March 2024.

**Energy supply per capita** is defined as primary energy production plus imports minus exports minus international marine bunkers minus international aviation bunkers minus stock changes divided by the population. For imports, exports, international bunkers and stock changes, it includes secondary energy products, in addition to primary products.

**Source of the data:** United Nations Statistics Division (UNSD), New York, Energy Statistics Yearbook 2021, last accessed March 2024.

**Exchange rate** in units of national currency per US dollar refers to end-of-period quotations. The exchange rates are classified into broad categories, reflecting both the role of the authorities in the determination of the exchange and/or the multiplicity of exchange rates in a country. The market rate is used to describe exchange rates determined largely by market forces; the official rate is an exchange rate determined by the authorities, sometimes in a flexible manner. For countries maintaining multiple exchange arrangements, the rates are labelled principal rate, secondary rate, and tertiary rate.

**Source of the data:** International Monetary Fund (IMF), Washington, D.C., the International Financial Statistics (IFS) database supplemented by United Nations Department of Management (DM), UN Treasury operational rates of exchange, last accessed June 2024.

**Fertility rate** is the total fertility rate, a widely used summary indicator of fertility. It refers to the number of children that would be born per woman, assuming no female mortality at child bearing ages and the age-specific fertility rates of a specified country and reference period.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Population Prospects (WPP): The 2024 Revision"; supplemented by data from the United Nations Statistics Division (UNSD), New York, Demographic Yearbook 2022.

**Forested area** refers to the percentage of land area occupied by forest. Forest is defined in the Food and Agriculture Organization's Global Forest Resources Assessment as land spanning more than 0.5 hectares with trees higher than 5 metres and a canopy cover of more than 10 percent, or trees able to reach these thresholds in situ. It does not include land that is predominantly under agricultural or urban land use. Data are calculated from the forest estimates divided by the land area.

**Source of the data:** Food and Agriculture Organization of the United Nations (FAO), Rome, FAOSTAT database, last accessed May 2024.

**GDP: Gross domestic product** is an aggregate measure of production equal to the sum of gross value added of all resident producer units plus that part (possibly the total) of taxes on products, less subsidies on products, that is not included in the valuation of output. It is also equal to the sum of the final uses of goods and services (all uses except intermediate consumption) measured at purchasers' prices, less the value of imports of goods and services, and equal to the sum of primary incomes distributed by resident producer units (see System of National Accounts 2008). The data are in current United States (US) dollars and are estimates of the total production of goods and services of the countries represented in economic terms, not as a measure of the standard of living of their inhabitants. To have comparable coverage for as many countries as possible, these US dollar estimates are based on official GDP data in national currency, supplemented by national currency estimates prepared by the Statistics Division using additional data from national and international sources. The estimates given here are in most cases those accepted by the United Nations General Assembly's Committee on Contributions for determining United Nations members' contributions to the United Nations regular budget. The exchange rates for the conversion of GDP national currency data into US dollars are the average market rates published by the International Monetary Fund, in International Financial Statistics (IFS). Official exchange rates are used only when free market rates are not available. For non-members of the Fund, the conversion rates used are the average of UN Treasury rates of exchange. It should be noted that the conversion from local currency into US dollars introduces deficiencies in comparability over time and among countries which should be considered when using the data. For example, comparability over time is distorted when exchange rate fluctuations differ substantially from domestic inflation rates.

**Source of the data:** United Nations Statistics Division (UNSD), New York, National Accounts Statistics: Analysis of Main Aggregates (AMA) database, last accessed April 2024.

**GDP growth rate** is derived on the basis of constant 2015 price series in national currency. The figures are annual rates of growth expressed in percentages.

**Source of the data:** United Nations Statistics Division (UNSD), New York, National Accounts Statistics: Analysis of Main Aggregates (AMA) database, last accessed April 2024.

**GDP per capita** estimates are the value of all goods and services produced in the economy divided by the population.

**Source of the data:** United Nations Statistics Division (UNSD), New York, National Accounts Statistics: Analysis of Main Aggregates (AMA) database, last accessed April 2024.

**Health: Physicians** includes generalist medical practitioners and specialist medical practitioners, expressed as the number of physicians per 1 000 population. The classification of health workers used is based on criteria for vocational education and training, regulation of health professions, and activities and tasks of jobs, i.e. a framework for categorizing key workforce variables according to shared characteristics.

**Source of the data:** World Health Organisation (WHO), Geneva, WHO Global Health Workforce statistics database, last accessed April 2024.

**Health: Current expenditure** refers to all health care goods and services used or consumed during a year excluding capital spending, or rather “gross capital formation”, which is the purchase of new assets used repeatedly over several years. These estimates are in line with the 2011 System of Health Accounts (SHA). Current expenditure is expressed as a proportion of Gross Domestic Product (GDP).

**Source of the data:** World Health Organization (WHO), Geneva, WHO Global Health Expenditure database, last accessed April 2024.

**Important sites for terrestrial biodiversity protected** shows land which contributes significantly to the global persistence of biodiversity measured as a proportion of which is wholly covered by a designated protected area. Data are based on spatial overlap between polygons for Key Biodiversity Areas from the World Database of Key Biodiversity Areas and polygons for protected areas from the World Database on Protected Areas. Figures for each region are calculated as the proportion of each Key Biodiversity Area covered by protected areas, averaged (i.e. calculated as the mean) across all Key Biodiversity Areas within the region.

**Source of the data:** United Nations Environment Programme (UNEP) World Conservation Monitoring Centre (WCMC), Cambridge, Sustainable Development Goals (SDGs) statistics database, last accessed July 2024.

**Individuals using the Internet** refer to the percentage of people who used the Internet from any location and for any purpose, irrespective of the device and network used. It can be via a computer (i.e. desktop or laptop computer, tablet or similar handheld computer), mobile phone, games machine, digital TV, etc. Access can be via a fixed or mobile network. There are certain data limits to this indicator, insofar as estimates have to be calculated for many developing countries which do not yet collect information and communications technology household statistics.

**Source of the data:** International Telecommunication Union (ITU), Geneva, the ITU database, last accessed March 2024.

**Under five mortality rate** is the ratio of deaths (the deaths of children under five years of age) in a given year to the total number of live births in the same year, expressed as a rate per 1 000 live births

**Source of the data:** United Nations Population Division (UNPD), New York, “World Population Prospects (WPP): The 2024 Revision”; supplemented by data from the United Nations Statistics Division (UNSD), New York, Demographic Yearbook 2022.

**Intentional homicide rate:** The rates are the annual number of unlawful deaths purposefully inflicted on a person by another person, reported for the year per 100 000. For most countries, country information on causes of death is not available for most causes. Estimates are therefore based on cause of death modelling and death registration data from other countries in the region. Further country-level information and data on specific causes was also used.

**Source of the data:** United Nations Office on Drugs and Crime (UNODC), Vienna, UNODC Statistics database, last accessed May 2024.

**International migrant stock** generally represents the number of persons born in a country other than that in which they live. When information on country of birth was not recorded, data on the number of persons having foreign citizenship was used instead. In the absence of any empirical data, estimates were imputed. Data refer to mid-year. Figures for international migrant stock as a percentage of the population are the outcome of dividing the estimated international migrant stock by the estimated total population and multiplying the result by 100.

**Source of the data:** United Nations Population Division (UNPD), New York, “International migrant stock: The 2020 Revision”, last accessed July 2022.

**International trade: Exports, imports and balance** show the movement of goods out of and into a country. Goods simply being transported through a country (goods in transit) or temporarily admitted (except for goods for inward processing) do not add to the stock of material resources of a country and are not included in the international merchandise trade statistics. In the “general trade system”, the definition of the statistical territory of a country coincides with its economic territory. In the “special trade system”, the definition of the statistical territory comprises only a particular part of the economic territory, mainly that part which coincides with the free circulation area for goods. “The free circulation area” is a part of the economic territory of a country within which goods “may be disposed of without Customs restrictions”. In the case of exports, the transaction value is the value at which the goods were sold by the exporter, including the cost of transportation and insurance, to bring the goods onto the transporting vehicle at the frontier of the exporting country (an FOB-type valuation). In the case of imports, the transaction value is the value at which the goods were purchased by the importer plus the cost of transportation and insurance to the frontier of the importing country (a CIF-type valuation). Both imports and exports are shown in United States dollars. Conversion from national currencies is made by means of currency conversion factors based on official exchange rates (par values or weighted averages). All regional aggregations are calculated as the sum of their components.

## Technical notes (*continued*)

---

**Source of the data:** United Nations Statistics Division (UNSD), New York, Commodity Trade Statistics Database (UN COMTRADE), last accessed June 2024.

**Labour force participation rate** is calculated by expressing the number of persons in the labour force as a percentage of the working-age population. The labour force is the sum of the number of persons employed and the number of unemployed (see ILO's current International Recommendations on Labour Statistics). The working-age population is the population above a certain age, prescribed for the measurement of economic characteristics. The data refer to the age group of 15 years and over and are based on ILO's modelled estimates, unless otherwise stated in a footnote.

**Source of the data:** International Labour Organization (ILO), Geneva, Key Indicators of the Labour Market (KILM 9<sup>th</sup> edition) and the ILOSTAT database, last accessed April 2024.

**Life expectancy at birth** is the average number of years of life at birth (age 0) for males and females according to the expected mortality rates by age estimated for the reference year and population.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Population Prospects (WPP): The 2024 Revision"; supplemented by data from the United Nations Statistics Division (UNSD), New York, Demographic Yearbook 2022.

**Major trading partners** show the three largest trade partners (countries of last known destination and origin or consignment) in international merchandise trade transactions. In some cases a special partner is shown (i.e. Areas nes, bunkers, etc.) instead of a country and refers to one of the following special categories. Areas not elsewhere specified (i.e. Areas nes) is used (a) for low value trade, (b) if the partner designation was unknown to the country or if an error was made in the partner assignment and (c) for reasons of confidentiality. If a specific geographical location can be identified within Areas nes, then they are recorded accordingly (i.e. Asia nes). Bunkers are ship stores and aircraft supplies, which consists mostly of fuels and food. Free zones belong to the geographical and economic territory of a country but not to its customs territory. For the purposes of trade statistics, the transactions between the customs territory and the free zones are recorded, if the reporting country uses the Special Trade System. Free zones can be commercial free zones (duty free shops) or industrial free zones. Data are expressed as percentages of total exports and of total imports of the country, area or special partner.

**Source of the data:** United Nations Statistics Division (UNSD), New York, Commodity Trade Statistics Database (UN COMTRADE), last accessed June 2024.

**National currency** refers to those notes and coins in circulation that are commonly used to make payments. The official currency names and the ISO currency codes are those officially in use, and may be subject to change.

**Source of the data:** International Organisation for Standardization (ISO), Geneva, Currency Code Services – ISO 4217 Maintenance Agency, last accessed June 2024.

**Net Official Development Assistance received or disbursed** is defined as those flows to developing countries and multilateral institutions provided by official agencies, including state and local governments, or by their executive agencies, each transaction of which meets the following tests: i) it is administered with the promotion of the economic development and welfare of developing countries as its main objective; and ii) it is concessional in character and conveys a grant element of at least 25 per cent. It is expressed as a percentage of Gross National Income of either the donor or recipient. The multilateral institutions include the World Bank Group, regional banks, financial institutions of the European Union and a number of United Nations institutions, programmes and trust funds.

**Source of the data:** Organisation for Economic Co-operation and Development (OECD), Paris, the OECD Development Assistance Committee (DAC) statistics database, last accessed June 2024.

**Population** refers to the medium fertility projected de facto population as of 1 July 2024, unless otherwise stated in a footnote. The total population of a country may comprise either all usual residents of the country (de jure population) or all persons present in the country (de facto population) at the time of the census; for purposes of international comparisons, the de facto definition is used, unless otherwise stated in a footnote.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Population Prospects (WPP): The 2024 Revision", last accessed July 2024.

**Population age distribution** refers to the percentage of the population aged 0-14 years and aged 60 years and older at the mid-year unless otherwise stated in a footnote.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Population Prospects (WPP): The 2024 Revision"; supplemented by data from the United Nations Statistics Division (UNSD), New York, Demographic Yearbook, 2022.

**Population density** refers to the medium fertility projected population as of 1 July 2022 per square kilometre of surface area, unless otherwise stated in a footnote.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Population Prospects (WPP): The 2024 Revision", last accessed July 2024.

**Population growth rate** is the average annual percentage change in total population size.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Population Prospects (WPP): The 2024 Revision", last accessed July 2024.

**Refugees and others of concern to the UNHCR:** The 1951 United Nations Convention relating to the Status of Refugees states that a refugee is someone who, owing to a well-founded fear of being persecuted for reasons of race, religion, nationality,

political opinion or membership in a particular social group, is outside the country of his or her nationality and is unable to, or owing to such fear, is unwilling to avail himself or herself of the protection of that country; or who, not having a nationality and being outside the country of his or her former habitual residence, is unable or, owing to such fear, unwilling to return to it. In this series, refugees refer to persons granted a humanitarian status and/or those granted temporary protection. Included are persons who have been granted temporary protection on a group basis. The series also includes returned refugees, asylum-seekers, stateless persons and persons displaced internally within their own country and others of concern to UNHCR.

**Source of the data:** United Nations High Commissioner for Refugees (UNHCR), Geneva, UNHCR population statistics database, last accessed June 2024.

**Region** is based on macro geographical regions arranged according to continents and component geographical regions used for statistical purposes as at 31 July 2017.

**Source of the data:** United Nations Statistics Division (UNSD), New York, Statistical Yearbook 2017 edition (60<sup>th</sup> issue) Annex I - Country and area nomenclature, regional and other groupings (based on Series M49: Standard Country or Area codes and Geographical Regions for Statistical Use), last accessed October 2017.

**Research & Development expenditure** refers to expenditure on creative work undertaken on a systematic basis in order to increase the stock of knowledge, including knowledge of humanity, culture and society, and the use of this stock of knowledge to devise new applications, expressed as a percentage of Gross Domestic Product (GDP). It is the total intramural expenditure on R&D performed on the national territory during a given period. It includes R&D performed within a country and funded from abroad but excludes payments made abroad for R&D.

**Source of the data:** United Nations Educational, Scientific and Cultural Organization (UNESCO), Montreal, the UNESCO Institute for Statistics (UIS) statistics database, last accessed June 2024.

**Safely managed water and sanitation:** population using safely managed drinking water sources is currently being measured by the proportion of population in urban and rural areas, according to national definitions, meeting the criteria for using safely managed drinking water sources (SDG 6.1.1) by using an improved basic drinking water source which is located on premises, available when needed and free of faecal and priority chemical contamination. Improved drinking water sources are those that have the potential to deliver safe water by nature of their design and construction, and include: piped water, boreholes or tubewells, protected dug wells, protected springs, rainwater, and packaged or delivered water. Population using safely managed sanitation facilities is currently being measured by the proportion of the population in urban and rural areas, according to national definitions, meeting the criteria for having a safely managed sanitation service (SDG 6.2.1a) by using a basic sanitation facility which is not shared with other households and where excreta is

safely disposed in situ or transported and treated off-site. Improved sanitation facilities are those designed to hygienically separate excreta from human contact, and include: flush/pour flush to piped sewer system, septic tanks or pit latrines; ventilated improved pit latrines, composting toilets or pit latrines with slabs.

**Source of the data:** World Health Organization (WHO) and the United Nations Children's Fund (UNICEF), Geneva and New York, the WHO/UNICEF Joint Monitoring Programme (JMP) for Water and Sanitation database, last accessed July 2023.

**Seats held by women in the National Parliament** refer to the number of women in the lower chamber of the National Parliament expressed as a percentage of total occupied seats in the lower or single House, situation as of 1 January 2024.

**Source of the data:** Inter-Parliamentary Union (IPU), Geneva, Women in National Parliament dataset and the Sustainable Development Goals (SDGs) statistics database, last accessed March 2024.

**Sex ratio** is calculated as the ratio of the medium fertility projected population of men to that of 100 women as of 1 July 2024, unless otherwise stated in a footnote.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Population Prospects (WPP): The 2024 Revision"; supplemented by data from the United Nations Statistics Division (UNSD), New York, Demographic Yearbook 2022, last accessed July 2024.

**Surface area** refers to land area excluding inland water.

**Source of the data:** United Nations Statistics Division (UNSD), New York, Demographic Yearbook 2022 and the demographic statistics database, last accessed July 2024.

**Threatened species** represents the number of plants and animals that are most in need of conservation attention and are compiled by the World Conservation Union IUCN/ Species Survival Commission (SSC).

**Source of the data:** International Union for Conservation of Nature (IUCN), Gland and Cambridge, IUCN Red List of Threatened Species publication, last accessed June 2024.

**Tourist/visitor arrivals at national borders** is any person who travels to a country other than that in which he or she has his or her usual residence but outside his/her usual environment for a period not exceeding 12 months and whose main purpose of visit is other than the exercise of an activity remunerated from within the country visited, and who stays at least one night in a collective or private accommodation in the country visited (see Recommendations on Tourism Statistics of the United Nations and the World Tourism Organization). The data refer to arrivals of non-resident tourists at national borders, unless otherwise stated in a footnote.

**Source of the data:** World Tourism Organization (UNWTO), Madrid, the UNWTO statistics database, last accessed December 2023.

**UN membership date:** The United Nations (UN) is an intergovernmental organization whose members are the countries of the world. Currently there are 193 Member States of the United Nations, some of which joined the UN by signing and ratifying the Charter of the United Nations in 1945; the other countries joined the UN later, through the adoption of a resolution admitting them to membership. The process usually follows these steps: first, the country applies for membership and makes a declaration accepting the obligations of the Charter; second, the Security Council adopts a resolution recommending that the General Assembly admit the country to membership and finally the General Assembly adopts a resolution admitting the country.

**Source of the data:** United Nations (UN), Department of Public Information (DPI), News and Media Division, New York, Member states and date of admission, last accessed May 2018.

**Unemployment** refers to persons above a specified age who during a specified reference period were: “without work”, i.e. were not in paid employment or self-employment as defined under employment; “currently available for work”, i.e. were available for paid employment or self-employment during the reference period; and “seeking work”, i.e. had taken specific steps in a specified recent period to seek paid employment or self-employment (see ILO’s current International Recommendations on Labour Statistics). The data refer to the 15 years and over age group and are based on ILO’s modelled estimates, unless otherwise stated in a footnote.

**Source of the data:** International Labour Organization (ILO), Geneva, Key Indicators of the Labour Market (KILM 9th edition) and the ILOSTAT database, last accessed April 2024 .

**Urban population** is based on the number of persons at the mid-year defined as urban according to national definitions of this concept. In most cases these definitions are those used in the most recent population census. The data are an average over five-year ranges; 2005-2010 data are labelled “2010”, 2011-2015 data are labelled “2015” and 2016-2022 data are labelled “2022”, unless otherwise stated in a footnote.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Urbanization Prospects (WUP): The 2018 Revision", last accessed May 2018.

**Urban population growth rate** is based on the number of persons defined as urban according to national definitions of this concept. In most cases these definitions are those used in the most recent population census. The data are an average over five-year ranges; 2005-2010 data are labelled “2010”, 2011-2015 data are labelled “2015” and 2016-2022 data are labelled “2022”, unless otherwise stated in a footnote.

**Source of the data:** United Nations Population Division (UNPD), New York, "World Urbanization Prospects (WUP): The 2018 Revision", last accessed May 2018.
